We guarantee you a saddle that fits and stays put!

The Delta panel

We have developed this saddle panel to relieve as much pressure as possible of the muscles in the horse's withers area and back. With the Delta panel we can make the front of the gullet channel extra wide, which minimizes the pressure on the panels and of the weight of the rider on the horse's back (trapezius muscle). Horses will relax their back muscles and show improved movements. They will go easier on the bit and perform better. The Delta panel, that creates an extra wide gullet channel in the front of the saddle, can only be assembled in combination with a Zadelwing.

Space Head Saddle Tree

A saddle tree specially developed for Dutch horses and riders

Features

- Soft seat
- Flexibility
- Comfort
- Freedom
- Adaptability
- Custom made

The combination of SHST, Flexi Zadelwing and Delta panel make the Vivary saddle a special saddle that fits well, provides the perfect seat and gives the horse extra movement.

Our aim was to develop a saddle that would cause the horse minimal hindrance in its movements. And a saddle that provides the rider with a good position and seat. To create a pain-free area under and around the saddle requires a saddler with a lot of knowledge, experience and insight. After years of research and testing the Bestfit saddler Hans Zuidweg succeeded in developing various innovative saddle adjustments which have brought a great improvement for the movements, performance and behaviour of the horse.

Vivary saddles innovations

The thoughts behind these and other innovative improvements were simple. We've searched for:

- Minimal hindrance for the horse through the saddle
- Maximum agility for the horse.
- Maximum relaxation for the horse.
- Maximum movement of the withers.
- Reducing concerns regarding the horse's wellbeing.
- The quest for the horse and rider's maximum joy.

What makes a Vivary saddle different than other saddles?

Vivary saddles are made on our in-house-developed and Dutch manufactured **SPACE HEAD SADDLE TREE (SHST)**.

- Like the name implies, the saddle tree has an **extra-large** head. As a result the withers are provided **ample space both in height and width, especially at the sides of the withers**.
- The tree has a **U-shape** instead of a **V-shape**. That enables the horse to bend better
- The gel inserts provides a soft and comfortable seat

Vivary saddles and the Flexi Zadelwing

On request the **Vivary saddles** can be equipped with the **Flexi Zadelwing**.

The Zadelwing provides a greater bearing surface underneath the saddle. As a result, the considerable pressure (weight) on the tree points and stirrup bars is distributed over a much larger area.

Hence problems of muscle atrophy and deep cavities behind the shoulder blades are prevented. With the Flexi Zadelwing we can adapt the width of the saddle by angling the bars parallel to the horse's shoulders.

- Unique Flexi Zadelwing system
- 100 to 200% pressure reduction in withers area
- Removable iron head for big adjustments
- Adjust the saddle in mere minutes. Even 2 to 3 sizes wider or narrower
- With an accuracy of 2 mm
- Without wool or other filler
- You can do it yourself
- Look at YouTube: Vivary rijzadel Flexi Zadelwing
